## INSURANCE CODES

D5225 Maxillary Partial Denture  
D5526 Mandibular Partial Denture

## TIPS

1. For best results use lightweight alginate impression materials.
2. Prior to initial insertion, soak the partial in hot tap water for approximately 1 minute. When the appliance cools to a tolerable temperature, gently insert it into the patient's mouth.
3. We recommend using the TCS Pink Zirconia Bur (5035Z) for minor adjustments and the TCS Brown Rubber Points (4513-01, 4514-01) to smooth the adjusted areas. Use light pressure in a scraping motion.
4. For a quick re-polish apply iShine polishing paste (4220-01) with a dry Mini Rag Buff (4221-01).
5. **Recommend the tcs® Concentrated Dental Appliance Cleaner to your patients for optimal appliance maintenance.**

*Chairside adjustment tools and FREE promo material available at [tcsdentalinc.com](http://tcsdentalinc.com).*

*"After many years of wearing an uncomfortable acrylic partial denture that would constantly break, my dentist prescribed me an iFlex™. I can finally smile and eat without any worries."*
